

MALAMA KIDNEY CENTER

HOW WE SUPPORT YOUR PATIENTS

PHYSICIAN ROLE

Provide diagnosis or treatment recommendations.

Order or change medications/supplements.

Order and interpret labs.

Counsel about care.

Give nutritional goals such as avoiding potassium.

Make recommendations on what health decisions are best for your patients. These decisions are only made with you, your patients, and their families.

MKC ROLE

Provide education about their health conditions and how it may affect their kidneys.

Help patients understand and manage their medications.

Educate patients on what to watch for, such as labs and symptoms.

Identify patient concerns and provide support and referral to community resources as appropriate.

Empower patients to achieve their health and nutritional goals through monthly education, monitoring and support.

Help patients to attain their health goals by developing a plan of care that is attainable.
